

Measuring writing skills in Spanish as a foreign language with generative artificial intelligence

Cantero Romero, M.-V., Martín-Valdivia, M.-T., Ortiz-Colón, A. M., & Jiménez-Zafra, S. M. – RIED-29(1)

THE CONTEXT AND THE CHALLENGE

Challenge: Initial Assessment in SFL

Erasmus

Assessment of writing competence in Spanish for Erasmus students is laborious and slow at the beginning of the course.

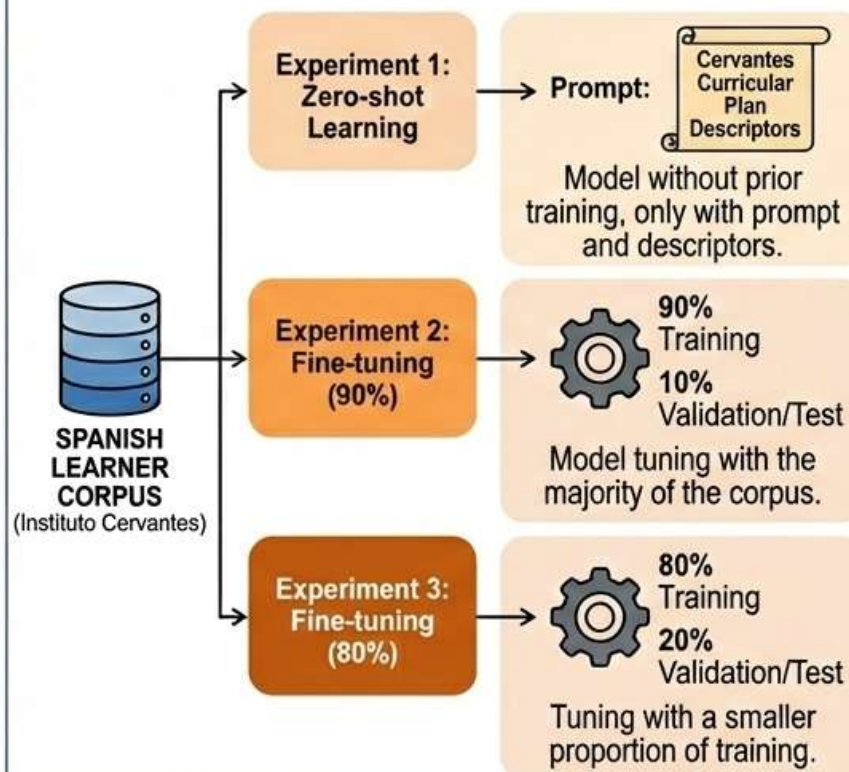

Proposed Solution: GAI and LLMs

(like ChatGPT)

Use of Large Language Models (LLMs) to automate and streamline writing assessment.

EXPERIMENTAL METHODOLOGY (3 PHASES)

RESULTS AND CONCLUSIONS

Results: Model Precision

Zero-shot
Low Precision

Fine-tuned
Significantly Higher Precision

Fine-tuned models identify the competence level with much higher precision.

Impact and Conclusion

Streamlines initial assessment, reduces teaching load, and improves efficiency. GAI as a valuable complementary tool under pedagogical guidance.

Conclusion: GAI (fine-tuned LLMs) is an effective tool for assessing writing in SFL, optimizing processes in multicultural educational contexts if guided by pedagogical criteria.
